PROJECTS

Gas Agency System

ASP.NET Based Project:

Description : Gas Agency Management system is an application developed in Java to automate the management procedures in gas depots.

The main aim of the project is to provide an effective working platform to computerize the whole billing system and inventory maintenance system.

After the implementation of this project, customers can order the gas through online and phone calls. It assists the gas depots in recording the name, address and other information of regular customers in any type of gas depot.

Job Portal

Java Based

Description : Job portal facilitates job seeker to get the desired job and job provider to search the appropriate candidate for the required position. It provides the users with all the necessary privileges to access and modify the data intended for them.
